DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jila Bakker on 21 November 2008.

The application has been amended as follows:

In claim 8, line 12 has been amended from "the first method is reliable" to "the first pulse period is reliable" to be consistent with the remainder of the claim.

Response to Arguments

2. Applicant's arguments, see the remarks filed 16 July 2008, with respect to claims 1-20 have been fully considered and are persuasive. The rejections of these claims have been withdrawn.

Allowable Subject Matter

3. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to anticipate or make obvious the inventions of claims 1-10 and 14-18, including, *inter-alia*, determining a first heart rate from a pulse oximetry signal using a first method, determining a second heart rate from the same signal using a second method, applying metrics to the pulse oximetry

Art Unit: 3735

signal to evaluate the reliability of the first heart rate, and using the first calculated heart rate when the metrics indicate that the first method is reliable, and using the second calculated rate if metrics indicate that the first is unreliable.

Baker (US 2002/0137994) discloses similar heart rate calculations, but using metrics to evaluate the reliability of both calculated rates in order to determine which to use, rather than evaluating just one.

Harada (US 5759157) discloses a method of evaluating reliability of data in order to determine a method for calculations, but Harada calculates only one result, evaluates it, and then if found unreliable, obtains new data for use in a second calculation.

The prior art of record fails to anticipate or make obvious the methods of claims 11-13 and 19-20, including, *inter-alia*, using a pulse oximeter to determine a heart rate by calculating a first pulse period from the pulse oximeter's signal, evaluating the reliability of the first pulse period by applying metrics to the signal, and, if found reliable, calculating a heart rate from the first pulse period, and, if found unreliable, calculating a second pulse period from the same pulse oximetry signal and converting that pulse period into a heart rate.

Baker calculates both heart rates before applying metrics to evaluate reliability; Harada captures new data for use in the second set of calculations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
